Capture the future: technologies for decarbonization.

The Ecospray path for a sustainable future of the shipping industry: from carbon capture to biofuels.

First Decarbonization Seminar

21st SEPTEMBER 2022
YACHT CLUB OF GREECE
18, Karagiorgi Servias
18533, Piraeus

ECOSPRAY

Welcome speech

Franco Porcellacchia

CEO Ecospray

First Decarbonization Seminar

ECOSPRAY

Ecospray started in 2005 as an engineering company. For 15 years we have made marine and industrial processes more sustainable with the **cleaning and treatment** of polluting emissions.

Today we offer a wide range of technological **solutions**, driven by the target of creating **clean energy for a zero-emission Planet**, for every industry.

market leader in **EGCS for Marine engines**

a global company that is part of **Carnival Corporation**

2 labs for in-house validation of test protocols, a **3rd lab** for fuel cell tests

800+ systems installed worldwide

5% R&D investment to turnover

ECOSPRAY
technologies for the planet

Our **activities**

- Exhaust gas pollution control (DeSOx, DeNOx and de-dusting)
- Renewable fuels (biogas upgrading and methane micro-liquefaction to LNG and bio-LNG)
- Green power generation (carbon capture and micro-generation systems based on micro-turbines and Molten Carbonate Fuel Cells)

Research & Development, Production, Installation supervision & commissioning, After sales support, Training & management, Data analysis & IoT

21 09 22

Capture the future: technologies for decarbonization.

First Decarbonization Seminar

CapLab ELECTROCHEMICAL CELLS

Decarbonization and carbon capture

ECOSPRAY technologies for the planet

Carbon capture, green power, clean fuel and air pollution control

cem catemission

Catalytic solutions and advanced equipment manufacturing
