
ECOSPRAY: BEST CASE FOR SUSTAINABILITY

Ecospray Technologies S.r.l. - Press release (November 17th, 2014)

Ecospray takes part in the 1st International Conference “Sustainability in manufacturing” as speaker of the Focus on the Chemical Industry with the presentation of the Ecospray best case in terms of sustainability.

The conference, organized by Assoreca, in partnership with the Green Economy Network, has the purpose to outline the state of the art in international studies and research in the field of sustainability and combine it with the observation of case studies from outstanding Italian manufacturers.

The conference, scheduled for the 20th of November 2014, will be held in Milan (Italy), in the Auditorium Assolombarda. An exceptional guest, Prof. Robert Stavins, the Chairman of the Environmental Economics Programme at Harvard University, is participating in the event.

In addition to professor Stavins, other important figures (from the public and private sectors) involved in environmental economics and sustainability in Italy will be taking part, including Professor Edo Ronchi (Fondazione per lo sviluppo sostenibile -Foundation for Sustainable Development), Professors Edoardo Croci and Fabio Iraldo (IEFE Bocconi University) and Professor Marco Taisch (Politecnico di Milano).

The event's focus is the presentation of best cases in terms of product and/or process sustainability achieved by some of the main Italian industries from various manufacturing sectors. The companies selected have been chosen by a technical-scientific committee. The talks, which are to be presented at a round table, will address actual situations and solutions that have already been implemented and that have given positive results in terms of environmental protection, social issues or have made the company more competitive.

Among the selected companies there is also Ecospray, which will present the project named SUSTAINABLE NAVIGATION: THE INNOVATIVE ECO-EGC SYSTEM FOR THE GAS TREATMENT OF MARINE DIESEL ENGINES.

Mr. Guido G. Ceccherelli, Ecospray's Vice President, will speak about the case history of the company in the round table dedicated to the chemical industry to demonstrate how to combine growth, innovation and sustainability in marine mobility.

Ecospray Technologies S.r.l. is a private Italian company that has been acting with increasing success in the gas cleaning and cooling technologies for many industrial applications and power plants since late 2005. With over 50 units already installed or on order, as of today for both cruise ships and ferries, Ecospray can be considered one of the most reliable partners for the marine EGCS applications.
